Million Ideas **ONE Billing**

Internet Services
WiMax ➤ *DSL ➤ Wi-Fi

Introducing Piranha

EyeBill Interactive Solutions Plc is a global solution provider of Billing and Customer Care solutions for the telecommunications industry. As such we are keen to develop our taste for innovation, industry know-how and ability to turn your business ideas into real success.

EyeBill is now introducing to you its next-generation product - Piranha Billing!

Piranha is targetting all kinds of mobile, traditional or VoIP service providers - giving them the ability to enjoy rapid business development and to outgrow their legacy billing systems with a conceptually new solution that incorporates the abilities of flagman OSS/BSS vendors, but offers revolutionary flexibility.

Complete
Billing

Internet Alone or Bundled - It's OK

EyeBill ONE [Piranha] offers a complete billing solution for multiple type of services. No matter if you plan to offer solely Internet services or they are going to be bundled with any voice or video subscriptions - Piranha will handle it. But as a fully integrated solution Piranha gives your customers the ability to use separate or unified balances for all services they are subscribed for. And even more, it is possible to have some of them prepaid and some of them postpaid in order to fulfill the demanding requirements of the current market for data services.

Business
Models

Where to Deploy EyeBill ONE?

- Both prepaid and postpaid business models are supported
Customers can be charged on per-minute or per-megabyte basis
- Ability to manage different kind of networks - xDSL, WiMAX, ISDN and similar.
Plus ability for traffic shaping of endpoints
- Wi-Fi hotspots with registered accounts or scratch cards
- Hotel or other public Internet services with external charging (export)
- Ability for tailor-made business models and easy integration with new types of hardware

Compatibility

Multiple AAA Interfaces Support

It is a common fact that offering a full-range of services is impossible with a single piece of equipment, and even sometimes not everything your service provider network needs can be obtained from a single vendor. That's why we designed Piranha to support multiple protocols and vendors at the same time, being able to unify customer accounts among them!

EyeBill Piranha supports the two most fundamental Authentication, Authorization and Accounting (AAA) protocols: RADIUS & DIAMETER Different Vendor-Specific Attributes can be supported, according to the requirements of the specific vendor you have found to meet best your requirements. All running at the same time, on the same Piranha billing instance, providing a merged single source of billing information. Also any other types of communication channels can be developed, especially for you, especially for your business case.
